

Wastewater Effluent Concentration Prediction App

Acknowledgments:

I would like to express my gratitude to everyone who made this project possible. The goal of this project is to provide a measure to industries to evaluate and improve water quality in order to preserve the environment and protect public health.

I would first like to acknowledge the use of artificial intelligence (Google Gemini) on the work of this project. Gemini was used in several places in my code to aid in machine learning model training and evaluation and for debugging.

I would next like to acknowledge the guidance from Professor Jude Okolie throughout this project. The skills I have learned from this class and the guidance and instruction from Professor Okolie have helped tremendously in the completion of this project.

Finally, I would like to thank Bucknell University for providing the resources and tools to allow the completion of this project. Not only have I received an outstanding education that has allowed me to learn the fundamentals to complete this project, but the other resources, such as library loans to access helpful articles, have allowed me to properly research and gather the proper data for this project.
